

OliOli Spring Camps

Unleash your creativity and get inspired by arts and engineering principles to create your own wonderful inventions.

Ages: 4-7 years old
Weekly Camp from 27th March - 7th April
9:30am - 1:30pm

Camp Content:

Circuit Blocks	Kids explore real components that are designed for anyone to start creating electrical circuits, starting with simple elements like bulbs, motors, and batteries, and moving on to utilizing more complicated parts and connections.
Brush Bots	Kids build small, motorized contraptions that move around in surprising ways, drawing and painting interesting patterns behind them.
Robo Labyrinth	We explore the basic concepts of robotics, coding, and programming by guiding our robot out of a giant maze built by our group of young adventurers!
Catapults	Catapult yourself into exploring the mechanical world of simple ballistic devices, creating a variety of contraptions, and developing various engineering practices at the same time.
Ready, Set, Scavenge!	Kids explore the skill, art, and science of map making, and embark on a museum-wide scavenger hunt putting their agility, intellect, and teamwork to the test!

Kids will also enjoy daily Gallery time, including our new temporary exhibition: The OliOli® Atelier!

Please note: Week 1 content will be repeated in Week 2.
